Aroma Resources targets gold system at Slate Dam

Aroma Resources Ltd (ASX:AAJ) has recommenced drilling at its Slate Dam Gold Project located near Kalgoorlie in Western Australia.

A total of 974 metres was drilled in December, and the results from these activities are expected in January/February.

This is part of a more comprehensive 5000 metre reverse circulation drilling program targeting proven mineralisation.

Historical data useful but incomplete

The initial project evaluation used historical data which defined a bottom-of-hole geochemical gold anomaly of considerable size over a small part of the Slate Dam prospect.

Aroma is of the view that all the geological requirements for a gold system are in place, but they are masked due to Lake Yindarlgooda covering the anomaly.

The substantial gold anomaly was delineated in past exploration activity, but inadequately drill tested.

Previously to find gold intercepts to be tested

In targeting this anomaly, Aroma will also test the basement which has previous drilling defined gold intercepts that were not followed up.

The prospective shales are reported by Aroma to have many similarities to the Invincible Deposit at Kambalda which hosts 2 million ounces of gold at grades of more than 4 g/t.
