Awaiting further drilling results

Alta has been encouraged by the latest fieldwork at Punta Corna which it says "has the potential to be extensive" as it is open in all directions, including vertically.

The company has carried out detailed mapping and sampling of seven main veins at Punta Corna that contained cobalt, nickel, copper and silver.

Mineralisation has so far been discovered over a strike length of at least 2,500 metres and down to a vertical depth of 340 metres.

The additional discovery of closely spaced mineralised vein 'splays', lying between several main veins, has increased the potential vein widths.

Further results from this campaign are expected shortly.
